- Georgi Serev (username: lockheed)
- Elizaveta Kasnakova (username: elizaveta.kasna)
- Tanya Petkova (username: Tanya)
- Gabriela Angelova (username: kalbo_17)

Project purpose

Our project - CodeChest – represents our idea of an application, which makes the file sharing easier and more enjoyable for all people. As students in Telerik Academy we share files with code every day to ask for help or just to show the others how we solved a specific problem. A typical example are the most questions and answers in the forum of the Academy. Our application is a bit better than the well-known pastebin.com, because it is user-oriented - you can not post a code file there anonymously. We share the idea, that it is much better to know who the author of the current code is and to be able to contact with him or her. Our application provides the ability to create your own account in it and to share files from it. In your profile you can add an avatar image, which is stored for you directly in the cloud - in our Kiwi-

Teams' Dropbox account. Every time you need to get your image as file or to share it as well, you become from us a link, which gives you the ability to do it. We have an user-friendly web client, too.
